Renewable

Feedstock* that can be naturally replenished

Recycled

Material made from products that would otherwise be disposed of

Post-consumer waste

Waste originating from the end-consumer of a material stream, without involving the production of another product.

Bio-based

Material made from substances derived from biological/organic matter

Bio-attributed

Material produced with an allocated amount of bio/renewable feedstock* that would otherwise be fossil-based

Recyclable/ Circular

Material that can be used as feedstock* to produce new products

Sustainable

Feedstock* that cannot feasibly be depleted in any reasonable time frame

*material used to produce something in an industrial process

Carbon Footprint

Measure of the amount of carbon dioxide released into the atmosphere as a result of the activities of an individual or organisation.

Eco friendly

Not harmful to the environment

Environmentally sustainable

Maintaining a balance in our environment and resources to support the wellbeing of generations to come
